## Michigan Energy Policy Path to a Cleaner, More Affordable Future

James Clift, Policy Director Sarah Mullkoff, Energy Program Director May 7, 2015

## Electricity Rate Increases

### How do we get to lower rates?

- \* Establish clear goals for utilities
- \* Make energy efficiency investments that allow the state to close plants and not have to replace them
- \* Address capacity constraints through rate design that sends better price signals to customers
- \* Better utilize existing capacity and close marginal units

## Michigan Energy Plan - Goals

## Energy efficiency potential study

- \* "Achievable" potential of 15% reduction of demand over ten years
- \* Estimated cost of \$22/MWh (~60% of the variable costs of generating power)
- \* Oppose repeal of the "most" cost effective method of meeting energy demand.

**Control Costs** 

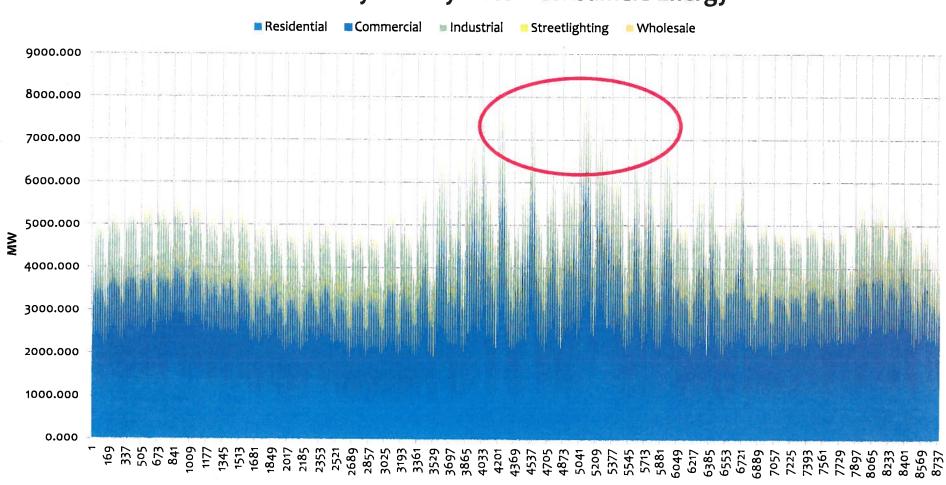

Protect Public Health and Natural Resources

Maintain Reliability

Minimize Risks

Promote Economic Development

#### **Electricity Load by Class – Consumers Energy**

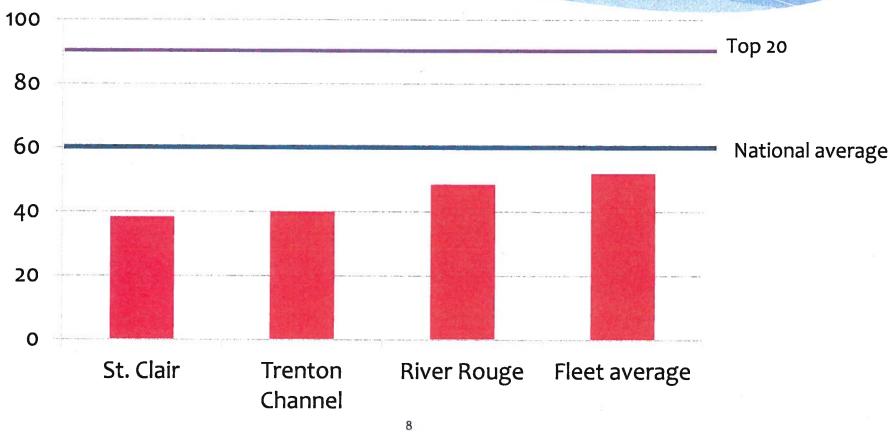

# Reduced costs through rate design

- Deployment of advanced meters has made time-of-day pricing possible.
- \* Pilot programs show time-of-day pricing has the ability to shave peak residential demand by 630 MW for Consumers Energy and 521 MW for DTE – about the same as capacity of nine announced coal plant closures (1200 MW)
- \* Expanded to all customers classes, could reduce utility costs by over \$200 million a year

Protect Public Health and Natural Resources

**Control Costs** 

### DTE coal plant capacity factors

# Renewable Energy – Continue the transition to cleaner energy

- \* Increase commitment to renewable energy.
- Only power source that can guarantee long-term stable prices
- Cost of renewable energy today are at or below costs of other energy sources
- Companies looking at energy mix when deciding where to locate
- \* Improves public health through reduced emissions

Control Costs

Minimize Risks

Protect Public Health and Natural Resources

Promote Economic Development

### Buyer's market for solar

- \* Recent bids at ~\$65/MWh
- Long-term stable prices
- \* Delivers power during peak usage hours
- \* Can be delivered using Michigan labor and materials

Promote Economic Development

**Control Costs** 

Protect Public Health and Natural Resources

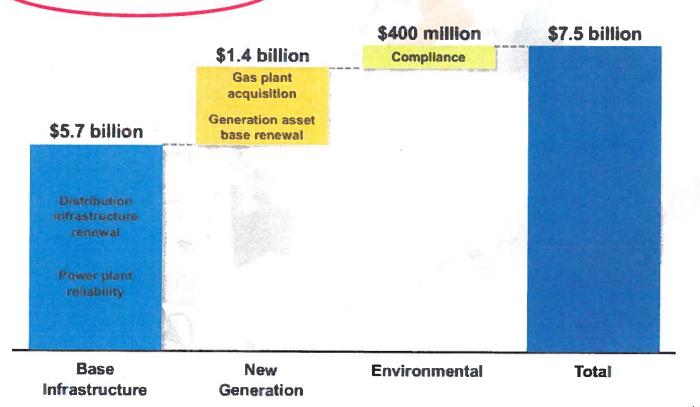

## Can Integrated Resource Planning replace standards?

- \* Shareholder interests will trump ratepayer interests
- \* IRP has not resulted in significant energy efficiency investments
- Leaving decision making to utilities has resulted in high costs for Michigan ratepayers
- IRP can compliment and fine tune direction given by the legislature or administration

Our electric utility is investing \$7.5 billion in three key areas through 2019

Targeting 5% - 6% growth

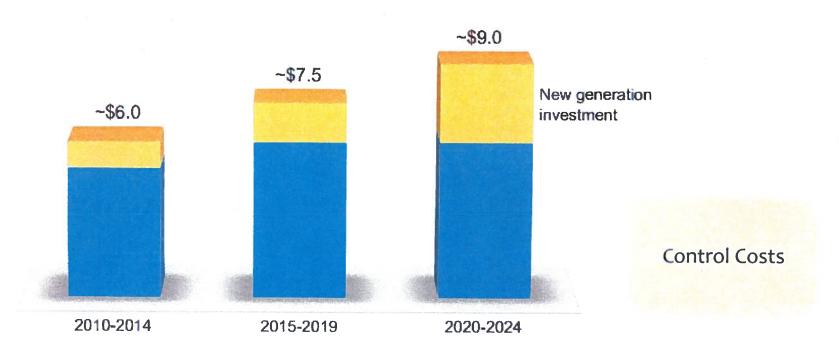

DTE Business Update, March 24, 2015

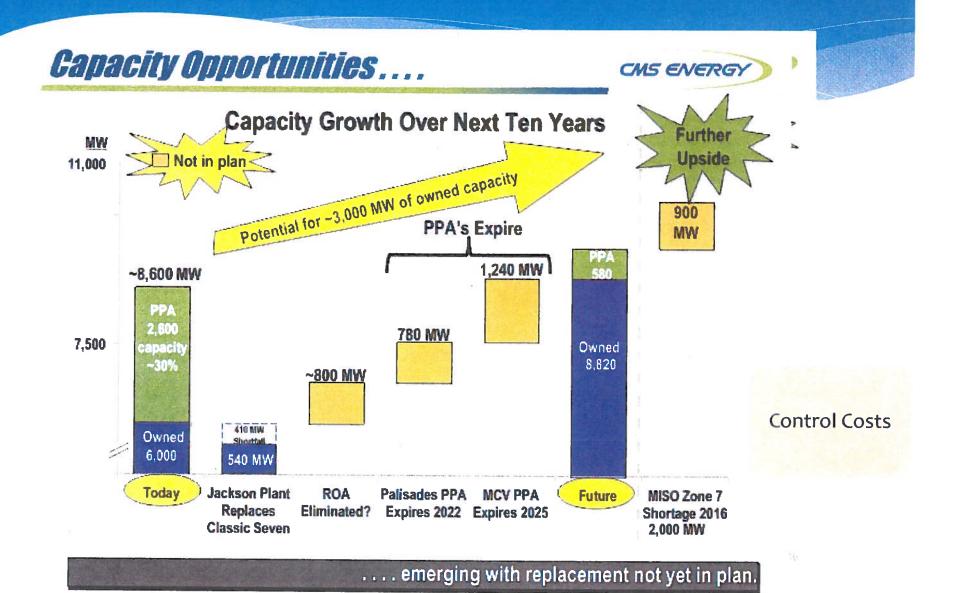

#### Generation replacement will significantly increase DTE Electric's **DTE Energy** investment over the next 10 years

(billions)

#### **DTE Electric Total Investment**

DTE Business Update, March 24, 2015

Consumers Energy – 3<sup>rd</sup> Quarter 2014 Report

## Next steps for Michigan

- \* Need for define our energy goals more clearly
- \* Need to improve long-term planning
- \* Need to harness information technology to achieve desired outcomes
- \* Increase the authority of the PSC to protect ratepayers
- \* Focus on reducing system-wide cost for all ratepayers
